

SECURITY INCIDENT REPORT

AUTOMATED MULTI-MODAL THREAT INTELLIGENCE ANALYSIS

Incident ID:	6d6cceb6-7ce7-4faa-87da-6185a187bcd6	Vector Type:	URL
Timestamp:	2026-08-05 10:35:21	Threat Severity:	LOW
Threat Score:	2	Status:	LEGITIMATE

Target Analyzed: 466450023145.nni

Evidence Breakdown (IoCs & Indicators)

The system identified the following threat indicators during analysis:

- Website is not using secure HTTPS encryption. Attackers commonly use such techniques to manipulate users, steal credentials, distribute malware, or impersonate trusted services. URLs containing these indicators should always be treated with caution until verified manually.
- The domain name contains numbers. While some legitimate domains contain numbers, phishing domains often include random digits or numeric sequences to create unique, automated domains for temporary campaigns.
- Website is not using secure HTTPS encryption. Attackers commonly use such techniques to manipulate users, steal credentials, distribute malware, or impersonate trusted services. URLs containing these indicators should always be treated with caution until verified manually.

Actionable Remediation Recommendations

The Security Operations Center recommends taking the following containment and recovery actions immediately:

- Always verify domain spelling before interacting.
- Ensure HTTPS is enabled on the browser address bar.
